

## Questions / double check:

- When clinicians are at work, do they use their own phone or work phone?
- Do they have an office space during work time? (doesn't have to be personal)
- How many "active" patients to attend to?

attention span / memory  
 Doctor & patient  
 comfort

## Situations

- emergency
- regular / check-up

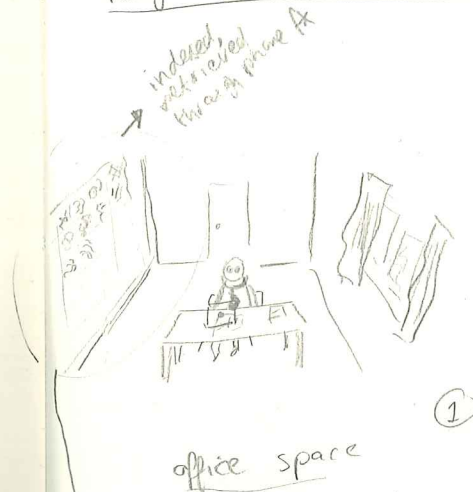

## Tangible interaction:

- hybrids with shape, texture, noise, vibration, light, material (fabric, plastic, etc)
- heat
- colour

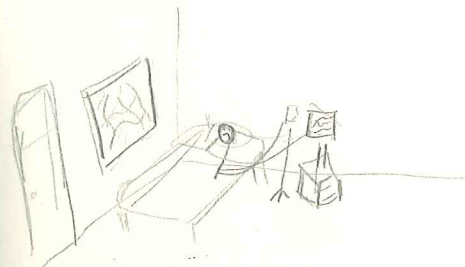

\* Petrelli, Soranzo, Cioffi, Reidy - exploring the aesthetics of tangible interaction: experiments...  
 \* Jonsson, Ståhl, Mercario, Karlsson, Ramani, Höck - The aesthetics of heat: guiding awareness with thermal stimuli  
 \* Löffler, Alt, Torizuka, Tscharr, Hurtienne - Substituting color for haptic attributes in conceptual metaphors for tangible interaction

## Regular / check-up

(random idea)

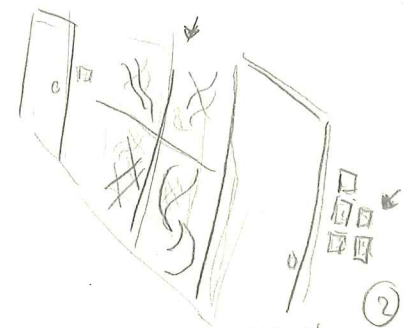

- interactive wall visualising biometrics of patients
- each "square" one patient
- fx. slowly moving = everything is okay → or colour
- faster is not okay
- different pattern for different disease or biometric data

## inside patient's room

- wall display
- touch / vibration / heat / light on body

- heat to door numbers
- interactive wall "coming out of" wall
