

colour temp

background light
→ oxyg. levels in blood average

oxyg. levels too low

oxyg. levels below average

blood pressure

fold & unfold -
fixed = heart rate

high heart rate

low heart rate

now

Aug / normal oxyg.

Below avg oxyg.

light

Too low oxyg.

colour =
body temp
light

amount of
strings visible
for heart rate

maybe
moving
away
from

the wall

horizontal instead?
perim. movement, instead of pulsating

blood pressure

servo

low heart rate

high heart rate

cant move
too fast

Heart rate?

2 layers,
 one partially
 covering other →
 lot of cover low heart rate
 little cover high heart rate

- Heart rate - low, avg, high
- Temp - low, avg, high
- Oxyg. levels - ~~low~~, avg, below, too low
- Blood pressure - low, avg, high.

Animated works well, but doesn't work in big grid

back layer front layer

→ front layer percentage / amount of covering back layer heart rate

back layer

LEDs

front layer

oxy. levels
in blood

open = high heart rate
closed = low heart rate

blood pressure
↳ wire → sticking out
LEDS
